

JNMT

1981 Subject Index

- Abdomen**
 Diametric rule technique to measure liver size, 83
 Radionuclide blood pool venography: a noninvasive modality for detection of deep vein thrombosis, 118
- Abscess**
 In-111 leukocyte imaging for detection of sepsis, 118
- Activity linearity**
 Dose calibrator activity linearity evaluations performed with exposures ALARA, 117
- Artifact**
 Bone imaging artifact related to technique, 117
 Evaluation of motion artifact in rest/exercise ventriculograms, 112
 "Hotspot" artifacts produced by magnification/I.D. control module, 194
 Minimizing clinical non-uniformity artifacts in uniformity-corrected gallium images, 114
 Quality assurance of multiple gated blood pool scintigraphy by proper R wave gating, 112
- Assertiveness**
 We're all members of a team, right? 49
- Background**
 Monitoring of gamma contamination through urine counting, 119
- Blood**
 Choosing a radiopharmaceutical for cardiac blood pool imaging, 150
 In vivo determination of regional body hematocrit in normal human subjects, 120
 Radionuclide blood pool venography: a noninvasive modality for detection of deep vein thrombosis, 118
 Review of a thallium-201 contamination incident, 156
- Bone**
 Bone imaging artifact related to technique, 117
 Case report: bone scan in pediatric sickle cell anemia complicated by osteomyelitis, 58
 Quantitative analysis of technetium-99m methylene diphosphonate bone imaging of knee, 117
- Bone, imaging**
 Comparison of Tc-99m HMDP and Tc-99m MDP using four methods of comparison, 116
 Quantitative bone imaging in prostatic carcinoma, 117
- Book review**
Clinical Radioimmunoassay-State-of-the-Art, 106
Computer-Assisted Cardiac Nuclear Medicine, 209
Dorland's Illustrated Medical Dictionary, 26th edition, 209
Fundamentals of Radiation Dosimetry, 105
Handling Radioactivity, 105
Legal Medicine with Special Reference to Diagnostic Imaging, 105
Liquid Scintillation Counting: Recent Applications and Development, 54
Management of Persons Accidentally Contaminated with Radionuclides, 54
Mosby's Manual of Nuclear Medicine Procedures, 163
Nuclear Medicine: Focus on Clinical Diagnosis, 209
- Nuclear Medicine Technology and Techniques*, 162
Nuclear Medicine Technology Examination Review, 106
Nuclear Medicine Technology Examination Review, 163
Perceptions of Risk: Proceedings of the Fifteenth Annual Meeting of the National Council on Radiation Protection and Measurements, 55
Principles of Noninvasive Cardiac Imaging: Echocardiography and Nuclear Cardiology, 164
Radioactivity and Its Measurement, 54
Scintillation Camera Acceptance Testing and Performance Evaluation, 105
Single Photon Emission Computed Tomography and Other Selected Computer Topics, 55
Year Book of Nuclear Medicine, 209
- Brain**
 Initial studies on the PETT-V, a seven-slice positron emission tomograph, 118
 Technical considerations in positron imaging, 118
 Visual system—a study using positron computed tomography, 118
- Breast**
 Internal mammary lymphoscintigraphy, 107 (1c)
- Camera, scintillation**
 Minimizing clinical non-uniformity artifacts in uniformity-corrected gallium images, 114
 Pitfalls in thallium-201 myocardial imaging, 58
 Review of a thallium-201 contamination incident, 156
 User solvable and detectable problems: image appearance and quality control, 115
 What's in a name? That which we call a collimator by any other name would resolve the same, 115
- Chromatography**
 Radiochemical evaluation of commercial iminodiacetate hepatobiliary radiopharmaceuticals, 185
- Clinical evaluation**
 Evaluation and comparison of four commonly found apparatus used in bolus injections for activity compactness and cost effectiveness, 113
 Intravenous injections in nuclear medicine: comparison of two methods, 32
 Parallel hole vs. slant hole collimators: comparison of right heart images, 113
 Pitfalls in thallium-201 myocardial imaging, 58
 Remote reservoir injection accessory for reducing exposure, 42
 Technical considerations in assessment of supine and upright gated cardiac imaging at rest and during exercise, 112
 Technologist's role in quality assurance of diagnostic imaging, 119
 Thyroid uptake of [^{99m}Tc] pertechnetate during in vivo RBC labeling: incidental diagnosis of hypothyroidism, 154
- Collimator**
 Effect of caudal angulation on measurement of ejection fraction and stroke volume ratio, 112
 Parallel hole vs. slant hole collimators: comparison of right heart images, 113
 Pitfalls in thallium-201 myocardial imaging, 58
 Thallium-201 myocardial imaging: comparison of high sensitivity and high resolution collimators, 35
 What's in a name? That which we call a collimator by any other name would resolve the same, 115
- Comparison**
 Comparison of Tc-99m HMDP and Tc-99m MDP using four methods of comparison, 116
- Computer**
 Calibration of high quality video imager for use with computer, 114
 Calibration of rotating gamma camera for transaxial tomography, 115
 Cardiac analysis software: comparative evaluation, 111
 Comparative results of equilibrium radionuclide ventriculography data acquired onto 64X64 (H-group) and 32X32 (S-group) computer matrices, 111
 Determination of left ventricular ejection fraction: new method that requires minimal operator training, 77
 Effect of caudal angulation on measurement of ejection fraction and stroke volume ratio, 112
 Evaluation of motion artifact in rest/exercise ventriculograms, 112
 Facilitated handling of gated blood pool scintigraphy using a microprocessor with basic programmability, 112
 Quality assurance of multiple gated blood pool scintigraphy by proper R wave gating, 112
 Quantitative analysis of technetium-99m methylene diphosphonate bone imaging of knee, 117
 Quantitative approach for assessing myocardial perfusion, 114
 Reformatting transaxial tomograms for improved organ visualization, 115
 Technical aspects of quantitative thallium-201 myocardial scintigraphy, 114
 Thallium-201 myocardial imaging: comparison of high sensitivity and high resolution collimators, 35
 Thallium-201 transaxial imaging using rotating camera, 113
 Use of phase images in display of conduction and contraction abnormalities, 111
- Coronary angioplasty**
 Exercise thallium scintigraphy as follow-up to coronary angioplasty, 113
- Data processing**
 Comparative results of equilibrium radionuclide ventriculography data acquired onto 64X64 (H-group) and 32X32 (S-group) computer matrices, 111
 Determination of left ventricular ejection fraction: new method that requires minimal operator training, 77
 Evaluation and comparison of four commonly found apparatus used in bolus injections for activity compactness and cost effectiveness, 113
 Facilitated handling of gated blood pool scintigraphy using a microprocessor with basic programmability, 112

- Parallel hole vs. slant hole collimators:
comparison of right heart images, 113
- Quantitating uptake of I-131 in functioning thyroid metastases, 119
- Quantitative approach for assessing myocardial perfusion, 114
- Reformatting transaxial tomograms for improved organ visualization, 115
- Technical aspects of quantitative thallium-201 myocardial scintigraphy, 114
- Use of phase images in display of conduction and contraction abnormalities, 111
- Departmental operations**
- Evaluating anxiety in patients referred for diagnostic nuclear medicine tests, 58
- Film mounting made easy, 161
- Technologist's role in quality assurance of diagnostic imaging, 119
- Where do we go from here? 159
- Display, color**
- Use of phase images in display of conduction and contraction abnormalities, 111
- Dose calibration**
- Dose calibrator activity linearity evaluations performed with exposures alara, 117
- Dose calibrator activity linearity evaluations with ALARA exposures, 188
- Monitoring of gamma contamination through urine counting, 119
- Editorial**
- Our behind-the-scenes helpers, 26
- Salaries and advancements—or lack thereof, 183
- Search for the next editor, 139
- Three easy ways to get involved... 75
- Education**
- A survey of nuclear medicine technologists in Connecticut, 104
- Evaluating anxiety in patients referred for diagnostic nuclear medicine tests, 58
- Nuclear medicine technologists—where have they gone? 56 (le)
- Recruitment into nuclear medicine technology schools: a solution to shortages, 200

- Education, continuing**
- Continuing education and VOICE, 203
- Endocrinology**
- Quantitating uptake of I-131 in functioning thyroid metastases, 119
- Thyroid uptake of [^{99m}Tc] pertechnetate during in vivo RBC labeling: incidental diagnosis of hypothyroidism, 154
- Exercise thallium testing**
- Exercise thallium scintigraphy as follow-up to coronary angioplasty, 113
- Exposure**
- Fingertip and whole body exposure to nuclear medicine personnel, 91
- Film**
- Film mounting made easy, 161
- Film exposure**
- Image intensity settings for dual tomographic scanner, 88
- Flood field**
- In vivo labeled red cells in the detection of pericardial effusion, 81
- Minimizing clinical non-uniformity artifacts in uniformity-corrected gallium images, 114
- Fluorine-18 2-fluorodeoxyglucose**
- Visual system—a study using positron computed tomography, 118
- Gallium-67**
- Case report: bone scan in pediatric sickle cell anemia complicated by osteomyelitis, 58
- Case report: gallium study showing rare form of multiple myeloma, 199
- Gastrointestinal tract**
- “Hotspot” artifacts produced by magnification/I.D. control module, 194
- In vitro comparison of solid food radiotracers for gastric emptying studies, 116
- Generator**
- High energy contaminant: Mo-99/Tc-99m fission generator, 206
- Osmium-191-iridium-191m generator for first-pass radionuclide angiocardiology, 113
- Heart**
- Cardiac analysis software: comparative evaluation, 111
- Case report: abnormal liver tissue uptake of Tc-99m pyrophosphate during myocardial imaging, 196
- Choosing a radiopharmaceutical for cardiac blood pool imaging, 150
- Comparative results of equilibrium radionuclide ventriculography data acquired onto 64×64 (H-group) and 32×32 (S-group) computer matrices, 111
- Determination of left ventricular ejection fraction: new method that requires minimal operator training, 77
