

JNMT Peer Reviewers

Peer review is an important part of any scientific or medical education publication. Nuclear medicine clinical procedures and research represents the culmination of a variety of disciplines. Thus, review of work submitted for publication must be done by individuals who are expert in the various sciences employed and who are experienced in this arena. Additionally, reviewers donate time and talents to help authors objectively scrutinize their work for scientific accuracy and presentation. During 1988, the following individuals have served as manuscript reviewers for the *JNMT*. We thank them for their time and contributions to the *Journal*.
