## Baird's 530 the spectacular little nuclear spectrometer.

A coordinated manual system that produces like a giant. A completely reliable giant, that even provides automatic background subtract (It's also readily adaptable to an automatic system.)

The spectrometer, itself, contains all major electronic sub-assemblies, will identify all isotopes in a sample, and will determine and display the concentration of each isotope. Automatic baseline advance — all decades presettable, even an analog version — it's all there.

Get the facts.
