

The Directory of Accredited Programs identifies those programs that have met or exceeded the *Essentials and Guidelines for an Accredited Educational Program for the Nuclear Medicine Technologist*. These programs have voluntarily undergone a peer review process established by the Joint Review Committee on Educational Programs in Nuclear Medicine Technology (JRCNMT). Programmatic accreditation by the JRCNMT provides assurance to applicants that the program provides education and training based on professional standards. The current list of accredited programs follows.

Length

The professional portion of the program is 1 year in length. Institutions offering accredited programs may provide an integrated educational sequence leading to an associate or baccalaureate degree over a period of 2 or 4 years. The attached list identifies the entrance requirements for each program. The number 1 indicates programs that require applicants to possess a high school diploma or equivalent. The number 2 indicates programs that require applicants to have some postsecondary academic courses. The number 3 indicates programs that require applicants to have prior training in an allied health profession such as radiologic technology, medical technology, nursing, etc. The number 4 indicates programs that require applicants to have a baccalaureate degree with specific postsecondary courses.

Prerequisites

Applicants for admission must have graduated from high school or the equivalent and have acquired postsecondary competencies in human anatomy and physiology, physics, mathematics, medical terminology, oral and written communications, chemistry and medical ethics.

Curriculum

The curriculum includes methods of patient care, radiation safety and protection, nuclear medicine physics and radiation physics, nuclear instrumentation, statistics, radionuclide chemistry and radiopharmacy, radiation biology, diagnostic nuclear medicine imaging and nonimaging in vivo and in vitro procedures, radionuclide therapy, computer applications, immunology as related to nuclear medicine, and quality control and quality assurance.

Standards

Essentials are minimum educational standards adopted by the collaborating organizations. Each new program is assessed in accordance with the *Essentials*, and accredited programs are periodically reviewed to determine whether they remain in substantial compliance. The *Essentials and Guidelines* are available on written request from the Joint Review Committee on Educational Programs in Nuclear Medicine Technology.
